

I do communicate whenever I am encountering an error. With the help of Boopathy some of the most obstacles I have were resolved. I also give feedback regarding what I am working on either by email, discord, whats app, teamviewer and chrome desktop.

No I am not with it (web scraper ) but with the scripts that I have I can download the tenders from the municipality site and save them to folder. Now I am working with boopathy to get the special case site done (scraping tenders from the special case website). Currently busy marking the summatives for learner-ship since they are needed quickly for submission I almost done because I am left with rewrites for last book (114050 ) I am marking .

I do live up to company values, I do all the task assigned to me I am also willing and assist my colleagues with the stuff/task(if I know it) that they are struggling with.

I have assisted on preparing the office for our new colleagues, and also learnership guys. I have managed to mark the books I have assigned to mark for the last batch and only 3 rewrite that I am left with. It was better a lot of my task I have completed namely marking the book I was assigned to mark for third batch of submission, Backing up our application from IHLM server, backing up the dependencies of our app from IHLM and also restoring back all the apps and the dependencies. Finally know how to do virtual host. Being involved in new network structure for LPC. I assisted the learnership guys to get discord installed to their PC and also showed the how discord works

I have good attitude towards my colleagues and I also do the task I am assigned to work on.

It was better a lot of my task I have completed namely marking the book I was assigned to mark for third batch of submission, Backing up our application from IHLM server, backing up the dependencies of our app from IHLM and also restoring back all the apps and the dependencies. Finally know how to do virtual host. Being involved in new network structure for LPC.

I do seek feedback regarding the task I have been assigned to do. I also give back the feedback regarding the the task I am working on an example although I am not spending much to the app I working I do give feedback to Boopathy and communicate with him daily. Installed all the dependencies that were need in order to run our app on the DR. I have updated the database table with employee status.

I have learnt how to do the virtual host on Linux servers and with the help of Siviwe and Boopathy now I know how to host. I have backed up all of the application from IHLM server and restored them back again. I have finished marking several books on learnership currently left with candidates that have done the rewrite for book 114050. I assisted the learnership guys to get discord installed to their PC and also showed the how discord works.

I do prioritize if there is any task that I am assigned to quickly do. Like rushing up to finish assessing the summatives for learners and also for those that were required to rewrite.

I have assisted on getting the office ready for learnership guy. I have showed Lamantambo how to access piglet, to view email list of every employee at lpc and also the password for each employee so that he can be able to solve the password issues our colleagues encounter. I did dumps with Samkelwe for all the databases at IHLM since we were going to wipe the server. I backed up all the application that are running at IHLM server. I created the list of the dependencies for IHLM. I

sorted out the email problems that Zanele, Nosiphe and Siphosomhle faced. I tested the application I back-uped on my machine as to make sure that I have correct backups. I shortlisted three candidates as Nosiphe instructed me to do so. I assisted Boopathy to solve the emails issues he had with his account.
